## PRESSEMITTEILUNG

Mühlheim, 20. Mai 2021

### New NFC21-Tool Release with extended D-Logic Reader support

---

*Zusammenarbeit mit D-Logic setzt einen wichtigen Meilenstein: erstmals auch Unterstützung der µFR Serie*

---

To simplify the entry into the world of NFC, NFC21 GmbH offers the NFC21-Tools, a software package for Windows for reading and writing NFC tags with focus on usability to facilitate the exploration of the possibilities of NFC. The new version marks an important milestone as it supports NFC readers of the µFR series from D-Logic for the first time.

The innovative µFR NFC Reader/Writer series combines robust hardware with an extensive software development kit. µFR Series devices are cross-platform and are supported on Windows, Linux, macOS, iOS, Android, as well as on single board computers such as Raspberry Pi, Arduino, Beaglebone, ESP, etc.

"The readers from D-Logic reflect our philosophy 1:1 in that they combine an attractive hardware design with a well-thought-out programming interface, allowing us to focus on user-experience and usability. With D-Logic we are able offer bundles of customized hardware matched to our software solutions", says Werner Gaulke, CTO of NFC21 GmbH.

NFC21 tools are free for non-commercial use and supports easy reading and writing of NFC-Tags with the windows operating system. The new version forms the base for upcoming new and exciting features currently in development by NFC21.

"We are happy to support NFC21 with our in-house expertise, which covers all stages of hardware, firmware and SDK development. Feedback from partners like

NFC21 is crucial and used to continuously improve our offering", says Sladjan Simic, CEO of D-Logic.
